Usage example

some example slides to see how Yerba works

Author

Bernado L. Español

This is a title

And this is a subtitle

Yo can write text, **in-line math** $f(x) = e^x$ and

$$\text{math} \quad \int_0^x f(x') \, dx = f(x)$$

out of line.

This is a title

And this is a subtitle

Yo can write text, **in-line math** $f(x) = e^x$ and

$$\text{math} \qquad \int_0^x f(x')\, dx = f(x)$$

out of line.

Additionally, you can write colorful things

This is a title

And this is a subtitle

Yo can write text, **in-line math** $f(x) = e^x$ and

$$\text{math} \qquad \int_0^x f(x')\, dx = f(x)$$

out of line.

Also, this space here was added using a `vspace`

Additionally, you can write colorful things

This is a title

And this is a subtitle

Yo can write text, **in-line math** $f(x) = e^x$ and

$$\text{math} \quad \int_0^x f(x')\, dx = f(x)$$

out of line.

Also, this space here was added using a `vspace`

Additionally, you can write colorful things

And this was written directly in Python

This is a title

And this is a subtitle

Yo can write text, **in-line math** $f(x) = e^x$ and

$$\text{math} \qquad \int_0^x f(x') \, dx = f(x)$$

out of line.

Additionally, you can write colorful things

You can even do other things with the text and math

$$2 + 3 = 5$$

You can even do other things with the text and math

$$\text{ঌ} + 3 = \pi$$

Grids

A bit about grids and subgrids

This is one *box*.

$$\int 2\,dx = 2t$$

example.png

Boxes can have different shapes

> command

Grids

A bit about grids and subgrids

This is one *box*.

$$\int 2\, dx = 2t$$

example.png

Boxes can have different shapes

command

These are the defined boxes
